OUR VISION

The main goal of a developer is to focus on the creation of a successful project whilst managing a number of tasks in order to launch. For a developer to deploy a contract, setting up a number of fully functional bots can be time consuming and inefficient. We have found the solution to this problem by creating an ecosystem of bots with specific functions that speed up the process of launching a project and eliminates unnecessary steps required.

It is time to innovate this space. **KØDE** is not only focused on creating one utility, our vision is to create a full ecosystem to support new developers, whilst rewarding **\$KØDE** holders at the same time.

THE ECOSYSTEM

On top of a web-based token creator and LP-locker. We will also be releasing a series of bots to help project owners create and launch a sustainable project. Below is a detailed introduction to our ecosystem.

KØDE TOKEN FACTORY

Token factory is our revolutionary telegram bot which is able to deploy a contract in less than a minute. The main purpose of this is being able to optimize the efficiency of creating tokens on EVM compatible smart-chains. After a KYC submission has been approved, a one-time payment in \$KØDE will unlock the functionality of our token factory telegram bot. Within the telegram bot, people are able to launch their own token with a custom contract layout, name, ticker, taxes and supply

KØDE LOCKER

Locker bot will be integrated into our KØDE ecosystem as addition to give developers the option to lock liquidity for their desired time with the safety of investors in mind to give reassurance to the community.

KØDE BUY

KØDE buy will be the buy bot of our ecosystem, after creating a token using the token factory bot, this will automatically be connected to the blockchain, scanning for new buys, and posting these into your desired telegram group. This will reduce the need of manual intervention when setting up a buybot.

THE ECOSYSTEM CONT'D

KØDE ADMIN

KØDE Admin will be the support bot within the ecosystem. Following token creation this admin will serve as your assistant in the main chat. There is no more need for setting up filters manually. After creating your token with the token factory bot, KØDE admin will automatically be integrated into your desired telegram group with predefined chat filters such as /ca, /chart, /taxes and other key filters. Other commands will be simple to setup and use to make it as seamless as possible for developers to focus on managing the project and building a strong community.

KØDE GUARD

KØDE Guard will be the protector of the ecosystem, which will also automatically be added to the dedicated telegram group. The purpose of this bot is to manage and handle unnecessary bot attacks and spam messages from external sources.

KØDE RAID

KØDE Raid will act as a raid leader, sending in tweets and telegram groups to raid automatically throughout the day, providing the community with clear direction to remain active which will help increase the exposure of the project.

 KØDEADMIN

 KØDEGUARD

 KØDERAIDS

THE BENEFITS

HOLDERS

Project owners and developers using our products will be required to pay in \$KØDE tokens of which the receiving contract address will automatically burn these tokens from supply, therefore bringing benefit to the chart and holders ultimately increasing the price of the token.

PROJECT OWNERS

KØDE will become a developers One Stop Shop for bots to create a fully functional project effortlessly, giving owners more time to focus on other areas. Using the KØDE ecosystem, this will also add a more unified structure amongst the bot admins in the telegram group.

PRICING

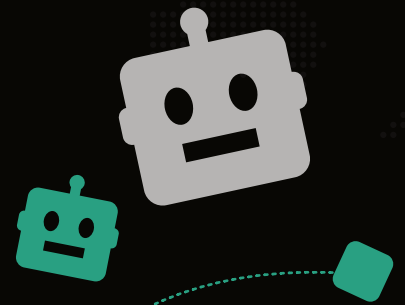

Our price plans will be available in two options giving flexibility and choice for anyone wanting to use our products.

SINGLE BOT PLAN

This plan will consist of a single bot purchase for developers who only require one of ours bots that we have to offer in our ecosystem. One specified wallet address will have access to unlimited use per purchase. The price of this plan is \$100, paid in \$KØDE tokens.

FULL BOT PACKAGE PLAN

This package will provide access to all bots in the ecosystem and is a one-off payment per wallet to gain full access. The price of this plan is \$300, paid in \$KØDE tokens.

TOKENOMICS

Total Supply: 10,000,000 KØDE

Tax:

6% for purchases.

6% for sells.

The buy and sell fees collected will be used for multiple purposes. This will include the following: Development of our utilities, marketing, buybacks, adding to liquidity and general running costs of the project.
